MAXIM BUNKOV

iOS Developer

bimawa.net | bimawa@gmail.com | +7 950 191 5459 | Remote | bimawa

"Consistency is the key to success."

Software Engineer

bimawa.net: https://bimawa.net

2025–2026 | Remote

Develop applications and automation tools: Wayo Brand for iOS — festival discovery, schedules and personal itineraries; MasterCRM — orders, financial tracking and PDF documents. Built Rust tools: KnowledgeQuery for documentation search and requirements-to-code traceability, emacsclientMCP for AI agents working with Emacs, and SpeedReaderRust for speed reading. Develop VRDesktopUltra to stream Mac displays to Quest over USB using ScreenCaptureKit, Metal, VideoToolbox and OpenXR. Built Suchariki, an IoT controller for a snack coating machine: Rust/Embassy firmware on ESP32-C3, browser-based drum and oil injection controls, temperature regulation and emergency stop. Designed parts and manufactured them using CNC and 3D printing, from models to physical prototypes. Established a specification-driven agentic workflow and a private semantic knowledge base using PostgreSQL/pgvector and local LLMs.

Senior iOS Developer

Makeomatic: https://makeomatic.ca

November 2018 → Present | Canada

Working on the StreamLayer.io startup project. Developing SDK for iOS/Android, as well as web version for sports applications. Extending HostApp functionality with features like chat, video calls, game statistics, betting, and more. We were among the first to create a Swift framework with community support, investing significant effort in the process. Next phase included SPM support adaptation. Navigated ABI compatibility challenges. Gained extensive experience across multiple domains, from CLI tool development to vibe coding.

Lead iOS Developer

Pravoved.ru: https://www.pravoved.ru

March 2017 - October 2017 Russia

Refactored and updated the application, expanded functionality, migrated architecture from MVC to VIPER. Maintained application stability and performance.

objective-c | realmDB | Core Data | REST

Lead iOS Developer

TradeAndChat

April 2012 - March 2017 Russia

Joined this company as a Junior iOS Developer. Deep dive into Objective-C from scratch — this startup provided me with a solid foundation in iOS development. Worked on challenging tasks including AMQP, RabbitMQ, security protocols, data exchange protocols, and binary data handling. Created an open-source AMQP protocol implementation for Objective-C from scratch (https://github.com/bimawa/AMQProtocol). Participated in VIPER architecture adoption, experimented with ReactNative, collaborated with designers using Sketch. Developed code generators for design styles before it became mainstream.

Senior Programmer

P2P Technology

April 2011 - April 2012 Russia

Built a webinar service platform. Streamed IT events regionally and nationally across Russia. Led full-stack development with Flash frontend and Groovy/Grails backend. Gained deep expertise in video/audio streaming challenges. Contributed to WebRTC implementation for Flash to JavaScript migration.

Senior Programmer

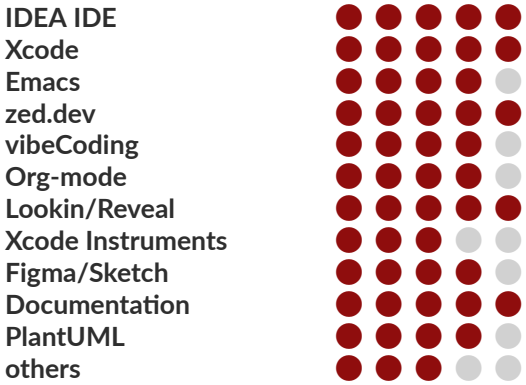

Sberbank of Russia

October 2006 - April 2011 Russia

Installed and maintained ATM/POS terminals.
In addition to primary duties, developed an equipment inventory management system using:

- PHP - backend
- AJAX - frontend
- Flash - transaction volume charts
- 2GIS - route planning for field engineers
- REST - API integration with other services
- Java - parsing transaction data
- MySQL - data collection and analysis for terminal downtime detection and timely maintenance

TOOLS

The TSTBase system streamlined support for economists and clients, enabling comprehensive inventory management of all ATMs and POS terminals.

Macromedia Flash/Flex Developer

Naumen

September 2004 - October 2006 Russia

While working as an office security guard, I pursued my passion for Macromedia Flash. My skills caught the attention of the development team, who brought me on board to develop an Adobe AIR application for the NAULearning system. This was my first major project, used by universities across Russia.

flex flash php mysql xml scorm websocket java javascript

Java Full-Stack Developer

RSVPU

May 2006 - October 2006 Russia

Developed the university portal based on IBM WebSphere Portal.

java SE/EE flash php javascript
